## EXPLANATORY NOTES

### 1. New or recent changes in presentation

A computer was used for the first time in the production of the 1963 statistics. Most of the tabulations are now produced by photo lithographic processes from the output of the computer system. The page size was altered from royal octavo to demy quarto and some tables were re-arranged either to meet the needs of the new system or to make better use of the available space, alterations in layout and presentation being kept to a minimum.

#### (a) *Changes introduced this year*

These changes result from the transfer to this volume of certain data previously included in the Registrar General's Statistical Reviews, Part III, Commentary.

Table A3(a). Previously described as Table A3.

Table A3(b). New table showing proportions of women married in each age-group, for selected years, with ratios to those for 1911.

Table B1. New abridged life table constructed from home populations and total deaths registered in the last three years.

Table B2. New serial table showing expectation of life at birth and at age 1 year.

Table C1. Previously described as Table B1.

Table C2. Previously described as Table B2.

Table D1. Previously described as Table C, and extended to include male/female birth ratios by legitimacy.

Table D2. Previously described as Table D.

Table D3. New serial table showing the quarterly incidence of live births in relation to the average for the calendar year.

Tables H1, H2, H3. Three new serial tables, replacing the former table H, and showing first marriage and remarriage rates and ratios by sex and age.

Table N1. Previously described as Table N.

Table N2. New serial table showing the quarterly incidence of marriage.

Table O1. Previously described as Table O.

Table O2. New serial table showing divorce rates of husbands and wives by ages at divorce.

Table P1(c). New table showing the grounds on which decrees absolute of dissolution of marriage were granted, by party and age.

Table P3(c). New table showing divorce rates per 1,000 related marriages by calendar year of marriage and the ages at marriage of both parties in combination.

Table P7(a). Previously described as Table P7.

Table P7(b). New table showing divorce rates per 1,000 related marriages by husband's or wife's age at and marital condition before the marriage and the calendar year of marriage.

Table U1. Previously described as Table U.

- Table U2. New serial table showing parliamentary and local government electors in England and Wales.
- Table U3. New table showing parliamentary constituencies by size for recent years, distinguishing county and borough constituencies in England and in Wales.
- Table V1. Previously described as Table V.
- Table V2. New table showing percentage of electorate voting in contested local government elections in urban areas, and in rural areas by regions.
- Table V3. New serial table showing percentages of electorate voting in contested local government elections in recent years.
- Table KK(a). Previously described as Table KK.
- Table KK(b). New table showing for recent years legitimate maternity rates for women married once only by age and marriage duration.
- Table QQ(c). New table showing family size distribution per 1,000 women married once only, by duration of, calendar year of, and age at marriage.
- Table SS(c). New table showing widowhood rates by age of surviving spouse for recent years.
- Table TT(a). Previously described as Table TT.
- Table TT(b). New table showing monthly birth incidence in relation to the average for the calendar year, for recent years.
- Table TT(c). New serial table showing live births by month of occurrence, seasonally adjusted.
- Table UU. New serial table showing illegitimate maternities and pre-maritally conceived legitimate maternities.
- Appendix B. A new series of tables has been introduced in this appendix showing various analyses of live births and stillbirths according to the place of confinement of the mother.

(b) *Changes introduced in 1964*

- Table S. Has been revised and now includes the following sections:  
 (a) Balance of civilian passenger movement into and out from the United Kingdom;  
 (b) Net intercensal population gain or loss by migration, England and Wales;  
 (c) Migration between the United Kingdom and countries overseas; and Migration into and out from the United Kingdom, analysed as follows:  
 (d) by sex, citizenship and route travelled; (e) sex, age and citizenship; (f) sex, age and marital condition; (g) sex, occupation and citizenship.
- Table QQ. Printed as Appendix A in the volume for 1963. Serial analysis of fertility by year of marriage and marriage duration.

2. **Supplements to Tables**

It is intended that the following supplements shall be published at intervals of several years:

**Supplement to Table AA**

Legitimate births by ages of parents in combination.

## Supplement to Table FF

Legitimate stillbirths per 1,000 illegitimate births by age of parents in combination.

## Supplements to Table HH

1. Legitimate live births to remarried women by age of mother at birth and the number of her previous liveborn children by all husbands.
2. Legitimate births by sex, to all married women, by age of mother at birth and the number of her previous liveborn children.
3. Legitimate male births per 1,000 legitimate female births, to all married women, by age of mother at birth and the number of her previous liveborn children.

## Supplements to Table II

1. Legitimate live births to remarried women, by age of mother at birth and duration of current marriage.
2. Legitimate live births to all married women, by age of mother at birth and marriage duration.

## Supplement to Table MM

Legitimate live births to remarried women, by duration of current marriage (in completed years and months), age of mother at marriage and calendar year of marriage.

Supplements to Tables AA, FF, HH and II were last published in 1961 and the Supplement to Table MM in 1962.

## 3. Populations

The estimates of population appearing in this volume and described as 'home', 'total' or 'civilian' have the following content:

- Home population* - the population, of all types, actually in England and Wales, distributed by area according to residence.
- Total population* - the home population *plus* members of H.M. Forces belonging to England and Wales and serving overseas but *minus* the Forces of other countries temporarily in England and Wales.
- Civilian population* - the total population *minus* members of H.M. Forces belonging to England and Wales at home or overseas.

In order not to count either deployment of H.M. Forces between home and overseas stations, or their recruitment or demobilisation, as migration, each intercensal national population estimate starts with the *total* population at the date of the previous estimate. To this is added natural increase and the net result of migration into and out of the civilian population (which may differ slightly from the balance of intending migrants derived from the International Passenger Survey, etc.). This gives the new *total* population. The subtraction from this of all of H.M. Forces regarded as emanating from England and Wales, wherever stationed, gives the new *civilian* population estimate. The addition of non-civilians (whether H.M. Forces or Allied Forces) actually stationed in England and Wales gives the new *home* population estimate. A minor difficulty in equating the difference between two *total* population estimates *minus* the net result of subtracting births from deaths with the precise figure for net migration during the period arises from the fact that provisional figures for births are used at the time population estimates are necessarily made, whereas published figures are usually of actual occurrences. Discrepancies between provisional birth figures and final occurrences are generally allowed for in the estimates for the following year.

The national estimates by sex and age for 1961 and 1962, published in Table A2 for each of those years were revised according to an age-graduation of the final results of the 1961 Census and with similarly based estimates for 1963, were presented in Appendices C and D and Table A2 (respectively) of the 1963 volume of the Statistical Review (Part II). The method of graduating was to divide the population enumerated at each single year of age by the number of births in the relevant past period and to draw a smooth curve through the resulting 'survivorship factors', allowing for the effects on the curve of migration and the temporary absence abroad of non-civilians. Multiplying the smoothed survivorship factors by the related births provides the graduated population of that age.

The national estimates by sex and age for 1960 have now been revised in the light of 1961 Census results, and appear in Appendix G of this volume. The estimates published in Tables A3 and A4 for each of the years 1961 to 1963 were also revised and appeared in Appendices B to G of the 1964 volume of the Statistical Review, (Part II).

#### 4. Births and birth rates

The births recorded and analysed for England and Wales for periods from 1939 onwards are those which *occurred* during the period. The numbers *registered* in 1965 are shown in the footnote to Table C1.

For classification by area (Tables E, BB, etc.), births and maternities are assigned to the area of the mother's usual residence if this is within England and Wales; if not, to the area of occurrence.

The national birth rates shown in Tables D1 and D2 are calculated by relating birth occurrences to the home population (before 1939, birth registrations to the home population; in 1914-19, birth registrations to the total population), except rates by legitimacy per 1,000 married or unmarried women aged 15-44, which are based on total population. The rates in Table E are calculated from birth occurrences and home populations (see note 3 above).

#### 5. Deaths and death rates

The deaths recorded (Tables E and SS) are the total *registered* (including non-civilians) in the calendar period, the time lag between the date of occurrence and the date of registration being usually only a day or two. In general, deaths have been assigned to the area of usual residence of the deceased; if this is not within England or Wales they are assigned to the area of occurrence. Accommodation provided under Parts III or IV of the National Assistance Act, 1948 is regarded as the place of residence of persons dying there. Before 1st January 1958 chronic sick and psychiatric hospitals were similarly treated for this purpose but from that date the method of classification was modified, the main change being that a death in such a hospital is now assigned to the area of occurrence only if the deceased had been there six months or more. If the deceased had been there less than six months the death is transferred to the area of previous usual residence.

In some small areas the numbers of deaths may also have been appreciably affected by the *opening, closing or change of use* of certain institutions, so that figures may not be comparable with those of earlier years.

The crude death rates in Table E are calculated from total deaths and home populations.

#### 6. Area comparability factors

##### (a) Births

The crude birth rates for local areas in Table E (col. 8) may not be comparable one with another because the populations on which they are based may contain different proportions of women of child-bearing ages. In order to eliminate differences between local birth rates due to this cause a standardising factor, termed an Area Comparability Factor is calculated (as described on page 30 of the 1954 *Statistical Review, Part III, Commentary*\*).

---

\*Obtainable from Her Majesty's Stationery Office, price 8s. 0d. net.

The product of the crude birth rate and this Area Comparability Factor (col. 9 of Table E) is a rate which makes allowance for this influence. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 10 of Table E.

#### (b) Deaths

The crude death rates for local areas in Table E (col. 14) may not be comparable one with another. In the first place, the populations on which they are based may have widely differing structures by sex and age. In order to eliminate differences between local death rates due to this cause a standardising factor, termed an Area Comparability Factor, is calculated (as described on page 57 of the 1954 *Statistical Review, Part III, Commentary\**).

In the second place the populations on which the crude death rates are based may include a disproportionate number of invalids if there are certain types of hospitals in the area. In order to eliminate this difference the Area Comparability Factors are adjusted so that they have the effect of apportioning the deaths and the populations in chronic sick and psychiatric hospitals over all areas of the country according to their non-institutional populations. The product of the crude death rate and this Area Comparability Factor (col. 15 in Table E) is a rate which makes allowance for these two influences. The ratio of this adjusted rate to the rate for England and Wales as a whole is shown in col. 16 of Table E.

### 7. Fertility Analyses

All the tables that appear in the Fertility Analyses are based upon occurrences with the exception of Table SS which is based upon registrations.

One of the changes introduced by part of the Population (Statistics) Act, 1960, which came into operation on 1st January 1961, was that the age of the child's father was required where his name was entered in the register, i.e. where the entry was that of a legitimate birth or of an illegitimate birth registered on the joint information of the parents. The analysis of illegitimate births by father's age in Table AA(b), being thus restricted to those births registered jointly by the parents where the father's age was stated, is therefore incomplete and may be misrepresentative.

The term 'maternity' in these tables is used to denote a pregnancy which has terminated in the birth of one or more live or still born children, and the term 'paternity' a legitimate pregnancy of the man's wife which has terminated in the birth of one or more live or still born children. The maternity record differs from the birth record in that multiple births from a single pregnancy are counted as one maternity, while for the birth record each child born is reckoned as a separate unit. The definition of a stillborn child is given in Section 41 of the Births and Deaths Registration Act, 1953, as follows: 'a child which has issued forth from its mother after the twenty eighth week of pregnancy and which did not at any time after being completely expelled from the mother breathe or show any other signs of life'.

The treatment of 'not stated' cases is explained in note 12.

Revised Tables JJ, KK, NN, OO, PP for the years 1961 to 1964, adjusted to take account of fertility data now available from the 1961 Census, are contained in Appendices C to F.

### 8. Divorces

The figures in Table O1 have been obtained from the Lord Chancellor's Department. Tables O2 and P1 to P7 have been compiled from the records of the Divorce Registry, controlled to the total given by Table O1.

### 9. Register of electors

Table U1, compiled from returns received from Electoral Registration Officers, shows the numbers of parliamentary electors on the February 1965 Register for each

---

\*Obtainable from Her Majesty's Stationery Office, price 8s. 0d. net.

parliamentary constituency as constituted at the date of the general election held on 15th October 1964. The number of votes cast at by-elections held on the February 1965 Register have been supplied by the Home Office. The 1961 acreages, which comprise land and inland water, for each parliamentary constituency, have been obtained from the Ordnance Survey Department.

The numbers of votes cast at by-elections held during the first six weeks of the calendar year are shown in footnotes to Table U in the preceding year's volume.

Tables U2 and U3 are derived from Table U1 for the current and preceding years, so far as they relate to parliamentary electors.

Table V1, which shows the number of local government electors, the total number of councillors on each council, and an analysis of local elections held in 1965, is compiled from returns received from clerks to local councils. Tables V2 and V3 are derived from the same source.

## 10. Migration

Table S shows various data, derived mainly from the International Passenger Survey on the balance of civilian passenger movement into and out from the United Kingdom.

The Government Social Survey has been commissioned by the Board of Trade to interview a stratified random sample of passengers entering and leaving the country on all the principal air and sea routes, other than to or from the Irish Republic, to obtain information about international migration, tourism and the contribution of 'travel' expenditure to the balance of payments.

On the long air routes nearly 7 per cent of the outgoing passengers and 4 per cent of the incoming passengers are interviewed at London Airport and Prestwick; 2 per cent of the short air route passengers in winter and 1 per cent in summer are also interviewed there. At the smaller airports the percentage sampled varies between half of one per cent and 4 per cent according to the time and the airport concerned. The sample weights are adjusted for known traffic densities, and appropriate allowance made for traffic not covered. On the short sea routes, about 1 per cent of the winter traffic and a half of one per cent of the summer traffic is interviewed. In a two stage sample, cross-channel boats are sampled in proportion to the weight of traffic they are expected to handle, and a pre-determined number of passengers is interviewed on each selected boat. On the long sea routes, every liner or other ship having more than 200 passengers arriving, or more than 100 passengers departing is covered. One ship in every two of other ships carrying more than 12 passengers on these routes is covered. Nearly 7 per cent of the outgoing and 4 per cent of the incoming passengers are sampled. A larger proportion of passengers leaving this country on the long sea and air routes is sampled in order to provide information about emigration from this country.

The totals so obtained when weighted and grossed up are subject to error.

The term 'migration' here relates to passengers whose declared intention is to reside in, or be away from, this country for at least a year.

## 11. International tables

Information for the completion of Tables W, X, Y and Z has been obtained from United Nations publications and from official sources.

## 12. 'Not stated' cases

Computer processing has permitted the use of new methods of dealing with cases where particular items of information are not known or not stated at registration. Hitherto such cases have been rateably distributed over certain tables. Now the computer assigns a specific value to any 'not stated' item in the record which is made use of in such tables. More specifically:

### *Births*

Births for which the age of mother, age of father, year of marriage or the number

of previous children was not stated have been assigned the value of the appropriate item from the last case with similar characteristics to be processed. Notes of the number of cases death with in this way have been included in the relevant tables.

### *Marriages*

Marriages with the age of one of the parties not stated have been assigned a value for that age based upon the other party's stated age, adjusted according to the combined marital condition of the parties. Where the ages of both parties were not stated, the values assigned have been those appearing on the last of a sub-sample of previous cases with the same combined marital condition.

### *Divorces*

Not stated age at marriage has been assigned a value in a manner similar to marriages. Present age is estimated from age at marriage.

## **13. Changes in boundaries**

Areas which have undergone a change in boundary during the year are identified in Table E by an asterisk \*, newly created areas by the sign †, and abolished areas by the sign ‡. Statistics for areas altered by the London Government Act, 1963 relate to the whole calendar year 1965, i.e. as if the boundary changes took effect from 1st January, 1965. Elsewhere the statistics shown for the current year represent the events assigned to the area within the boundaries as they existed at the date of the event, and the population given in Table E (col. 2), which is used for the calculation of crude birth and death rates, is a weighted average of the mid-year populations of the area as constituted before and after the change. This population figure may therefore differ from any given in Table A4 for the same region, conurbation, etc., which relates to the area as constituted at mid-year. Details of boundary changes are given in Appendix A.

## **14. Indication of reliability**

Rates given as 0 indicate that the actual rate is less than half of a unit. A dash (-) in any cell indicates that there were no events. Where a cell has been left blank no denominator is available. Rates calculated from less than 20 events are distinguished by italic type as a warning to the user that the smallness of the experience may affect their reliability as a measure.

### *Numbers*

If  $\bar{d}$  represents the deaths in an area and  $p$  the population in that area then, if  $\bar{d}/p$  is small, the standard error (s.e.) of  $\bar{d}$  is approximately  $\sqrt{\bar{d}}$  assuming that the deaths are independent of one another. Clearly, the larger the number of deaths the smaller will be the proportionate variability. A deviation either way of twice the s.e. may be expected about once in 20 times. Using this criterion one might expect towns each averaging 20 deaths per year to yield in the same year numbers ranging between 11 and 29 without such differences having any statistical significance. Alternatively it could be said that if 20 deaths were recorded for a town, this number would have a 95 per cent confidence interval of approximately  $\pm 9$ , there being a 95 per cent chance that the underlying mortality is represented by a number of deaths within this interval.

If  $\bar{d}$  is thought to be an extreme variation it would be more reliable to use as the standard error not  $\sqrt{\bar{d}}$  but  $\sqrt{\bar{d}'}$  where  $\bar{d}'$  is the number of deaths expected if some standard rate (e.g. the national rate) were applied.

### *Rates*

The appropriate standard error of a death rate when  $\bar{d}$  represents the number of deaths and  $p$  the population is

$$\frac{\sqrt{\bar{d}}}{p} \text{ or } \frac{m}{\sqrt{\bar{d}}}$$

where  $m$  is the death rate. The difference between two local death rates  $m_1$  and  $m_2$  can be regarded as significant only if it amounts to more than twice the standard error of the difference, viz.

$$2 \sqrt{\left(\frac{m_1^2}{d_1} + \frac{m_2^2}{d_2}\right)}$$

#### *Comparison of adjusted rates*

Before comparisons are made, other known sources of variation (such as differences in the sex and age composition of the population) must be removed. If  $C$  is the local death Area Comparability Factor, then  $mC$  is to be compared with  $m'$ , the national death rate. The s.e. of  $mC$  is

$$C \sqrt{\left(\frac{m}{p}\right)}$$

and

$$mC \pm 2C \sqrt{\left(\frac{m}{p}\right)}$$

is to be compared with  $m'$ . As already indicated,  $m'$  can be used instead of  $m$  in the calculation of the s.e. ;  $m'$  has the advantage of itself having only a small sampling error.

#### 15. Abbreviations

A.C. - administrative county.

C.B. - county borough.

M.B. - municipal borough.

L.B. - London borough.

U.D. - urban district.

R.D. - rural district.

Greater London - the Greater London Council Area, comprising the City of London (including the Inner and Middle Temple) and the London Boroughs.

#### 16. Additional tables and data

Tabulations of live births and stillbirths separately for each region, conurbation and local authority area in England and Wales by sex, legitimacy and month of occurrence are available at the General Register Office for reference: copies can also be supplied on payment.

## 17. Regions

The constitution and naming of the standard regions of England and Wales was changed at the beginning of 1965. Those used in this volume (with the exception of Tables F and M where the whole of Dorset has been included in the South Western Region) are as follows:-

Northern	West Midland	South Western
Cumberland Durham Northumberland Westmorland Yorkshire, North Riding	Herefordshire Shropshire Staffordshire Warwickshire Worcestershire	Cornwall Devon Dorset, Part of <sup>6</sup> Gloucestershire Somerset Wiltshire

Greater London

(In this volume, the Greater London Council Area (comprising the City of London (including the Inner and Middle Temple) and the London Boroughs) is presented in place of the Greater London conurbation).

20. Urban and rural aggregates

These aggregates comprise (a) the six conurbations combined, (b) the aggregates of urban local authority areas outside the conurbations in three groups according to the size of their resident population at the 1961 Census and (c) the aggregate of rural local authority areas outside the conurbations. Urban areas include boroughs and urban districts as defined by the Local Government Acts, and rural districts are also defined by those Acts.

21. Hospital regions

The hospital regions presented in this volume consist of aggregations of entire local authority areas. They are identical with the areas of the regional hospital boards except where the boundaries of the latter divide local authority areas. Any such divided local authority area is allocated to the hospital region containing the greater proportion of the population.

Estimates of the population of hospital regions in which the figures for the parts of divided areas have been allocated to the regions in which they are situated have been published in the Registrar General's Quarterly Return (see return no. 469 for the first quarter of 1966).

TABLE A5. Total population, projections from 30th June, 1965, by sex and age

England and Wales

These projections have been prepared by the Government Actuary's Department in consultation with the General Register Office

**Basis:** Mid-1965 estimate of Total population of England and Wales (plus members of H.M. Forces belonging to England and Wales and serving overseas but minus the forces of other countries temporarily in England and Wales).

**Assumptions (1965 Revision):**

**Mortality:** Death rates at the outset based on recent experience. At ages under 40, death rates are assumed to decline steadily over the period of the projection until, at the end of the forty years they are one half or less of the rates now being experienced. At ages over 40 the assumed rates of decline become progressively smaller as the age advances until they vanish at ages over 90.

**Natality:** The estimates assume 869,000 live births in the year mid-1965 to mid-1966 and a gradual increase thereafter to 948,000 in 1970, to 1,008,000 in 1980, to 1,199,000 in 1990 and to 1,364,000 in 2000. (Male/Female ratio 1.06 throughout).

**Migration:** A net inward migration from other parts of the United Kingdom and all countries overseas of 53,000 in the year mid-1965 to mid-1966, declining to 35,000 in the year mid-1970 to mid-1971 and to 18,000 a year from mid-1978 onwards. The net inward migration is assumed to comprise about 47½ per cent males and 52½ per cent females.

Projections involving children yet unborn are shown above the dotted line.

This abridged life table is constructed from the estimated home population in 1963, 1964, and 1965, and the total deaths registered in those years.

The column headed  $l_x$  shows for each sex, the numbers who would survive to exact age  $x$  out of 10,000 born who were subject throughout their lives to the recorded age death rates of the period.

Column  $e_x$  is the 'expectation of life', that is, the average future lifetime which would be lived by persons aged exactly  $x$ , if likewise subject to those death rates.

Note: The deaths included in this table, as in all tables of the *Statistical Review*, are those which occurred in England and Wales. The numbers which occur outside England and Wales are not generally large enough to be of much significance except for certain years, e.g. for the periods 1914-18 and 1939-47 deaths of non-civilians and merchant seamen which occurred outside England and Wales are estimated at 577,000 and 240,000 respectively.

†Provisional Adoption Orders, which were introduced on 1st April 1959 (see Adoption Act, 1958, section 53) are included in the total. These Orders confer authority on a person not domiciled in Great Britain to take a child out of this country for adoption.

\*The number of adopted children usually exceeds the number of Adoption Orders because the High Court does not issue a separate Order for each child where an adopter adopts more than one child at the same time.

\* Provisional.

1 Before 1939 and from 1950 onwards rates are based on home population. From 3rd September 1939 to 31st December 1949 the death rates are based on civilian population only.

2 1940-46 death rates are based upon civilians only.

3 Before 1938, territory of 1937. Before 1948, excluding territory ceded by Hungary in 1947.

4 Excluding infants born alive but dying before registration of birth.

5 1940-45 rates are averaged on years 1940-43. Before 1946, territory of 1937. From 1946 Federal Republic only, including Saar, incorporated 1st January 1957.

6 Before 1949, including Eilen and Tuddern.

7 Before 1948 excluding Dodecanese. Beginning 1949, rates based on births and deaths which have been adjusted for incomplete geographic coverage. Including armed forces stationed outside the country and excluding alien armed forces within the country.

8 Before 1943, territory of 1921-38. 1943-45 present territory but excluding that part of former Free Territory of Trieste incorporated in October 1954.

9 Before 1949 excluding Eilen and Tuddern. Including births occurring outside the country if one or both parents are included in a Netherlands population register, and deaths of residents outside the country if listed in a Netherlands population register. Prior to 1959 excluding data for Amboynese living in camps.

9 From 1940 successive territorial changes affect comparability.

\* In calculating these rates the few maternities to women whose stated age and marriage duration implied an age at marriage below the legal minimum of 16 have been excluded.

† Legitimate live birth rates.

**TABLE MM. Legitimate live births to women married once only, at integral marriage durations (in completed years or months)\* by mother's calendar year of marriage, age at marriage and the number of her previous liveborn children, 1964-65**

England and Wales

Note. Cases in which the mother's age, year of marriage or number of previous children were not stated have been included with the stated cases (for method of distribution see explanatory notes).

## APPENDIX B.

Distribution of live births and stillbirths by place of confinement, and age and parity of mother.

In the following tables the categories used for place of confinement are:-

**N.H.S. hospital**, i.e. hospitals and homes under the National Health Service, except psychiatric hospitals;

**Other hospital**, which are mainly maternity homes not under the National Health Service;

**At home**, i.e. at the usual place of residence of the mother;

**Other**, places of confinement which include all psychiatric institutions, homes for unmarried mothers, remand homes, reception centres, private houses (other than the mother's usual residence), etc.

*A set of tables is available for reference at the General Register Office showing numbers of live and still births with a breakdown as in Tables 2 and 3 of this Appendix for individual county boroughs and administrative counties within England and Wales. A copy of these tables, or of a table for a particular area, can be obtained from the General Register Office on payment.*

# The Registrar General's Statistical Review of England and Wales

## *Part III: Commentary*

This annual volume contains detailed analyses of the statistics of life and death already presented in Parts I and II of the Review which are designed to assist, in their administration or research, demographers, statisticians, medical research organisations, public health authorities, and all other individuals and organisations who have to take account of the vital statistics of England and Wales.

The Commentary for 1963 contains a review of the effects on mortality of the cold winter of that year, an analysis of deaths from thyrotoxicosis and myxoedema during the past twenty years, comment on migration statistics, and a report on the methods used to compile estimates of the marital condition of the population. It also provides an account of the working of the registration system in England and Wales and the sources and methods used for the production of the country's birth, death and marriage statistics.
